

# **DIAGA IRISH DANCERS**

## Technical Notes

### **STAGE**

A stage of approximately 20x10 feet works best, though we can cater our performance to any space.

If our dancers perform hardshoe, we will set up black marley over top of the dance floor surface. Marley is a black rubberized performance surface often used in dance studios - it looks sharp, and can be walked upon by anyone. It is the safest dance flooring available and prevents the stage from being scuffed by the dancers' hard-shoes. We will remove the marley at the end of the event.

### **MUSIC**

Where pre-recorded music is used, we will play music from a laptop beside the sound engineer. When performing with live music, we will coordinate with the musician in advance.

For all performances, a brief soundcheck and run-through of 15 minutes is most helpful.
